Navigating Advanced Status Labels

Getting Started Advanced Status Labels · https://izymes.com/docs/navigating-advanced-status-labels/

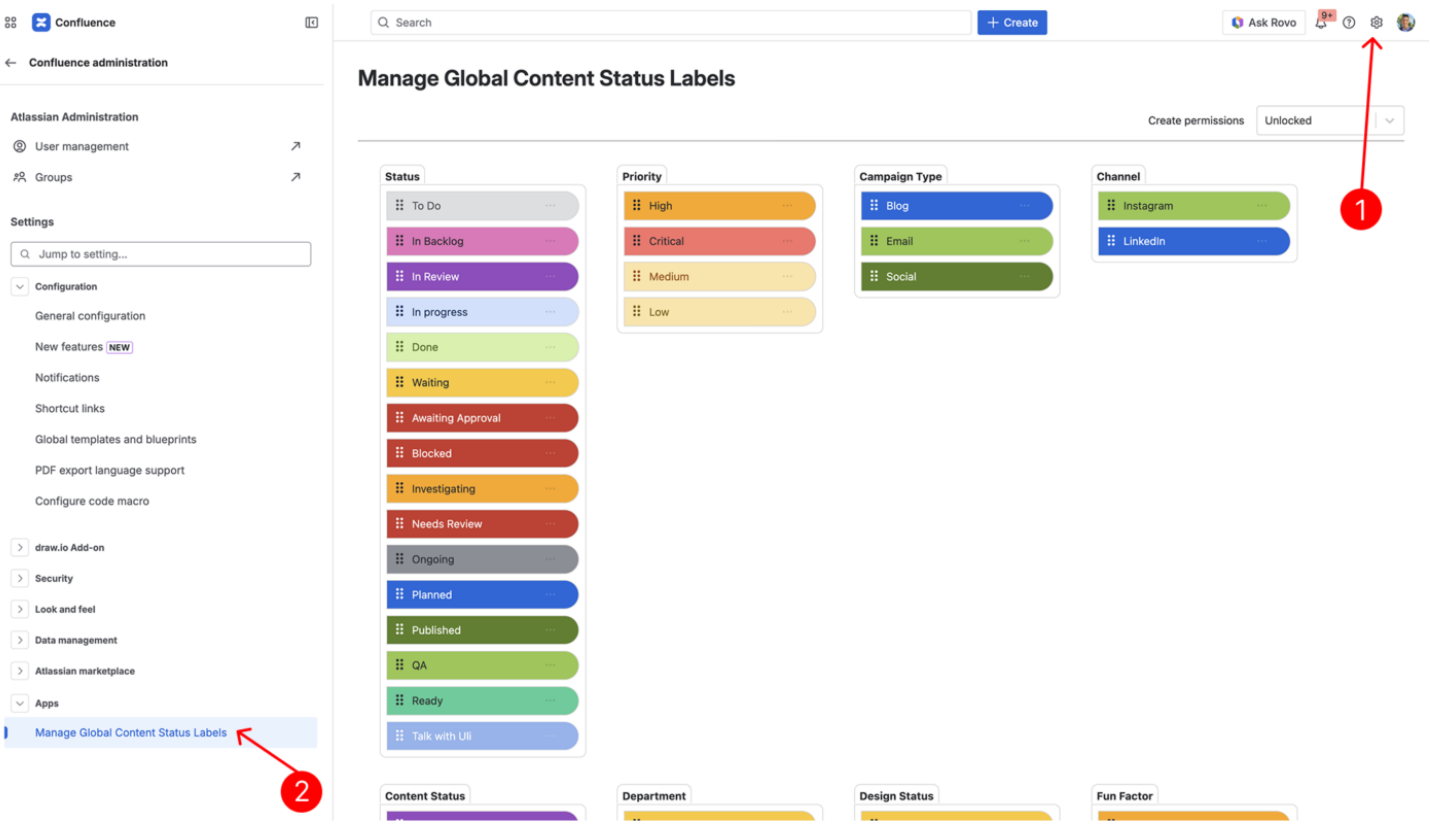

Once Advanced Status Labels is installed in your Confluence workspace, there are two main ways users will interact with the app:

- **Using pills on Confluence pages**
- **Managing pill categories and values through the admin interfaces**

With the introduction of **global** and **space** pills, navigation is now split across two levels of management.

Global Pill Manager

The **Global Pill Manager** is used by **Site Admins / Confluence Admins** to manage pill categories and values that should be available across the entire Confluence site.

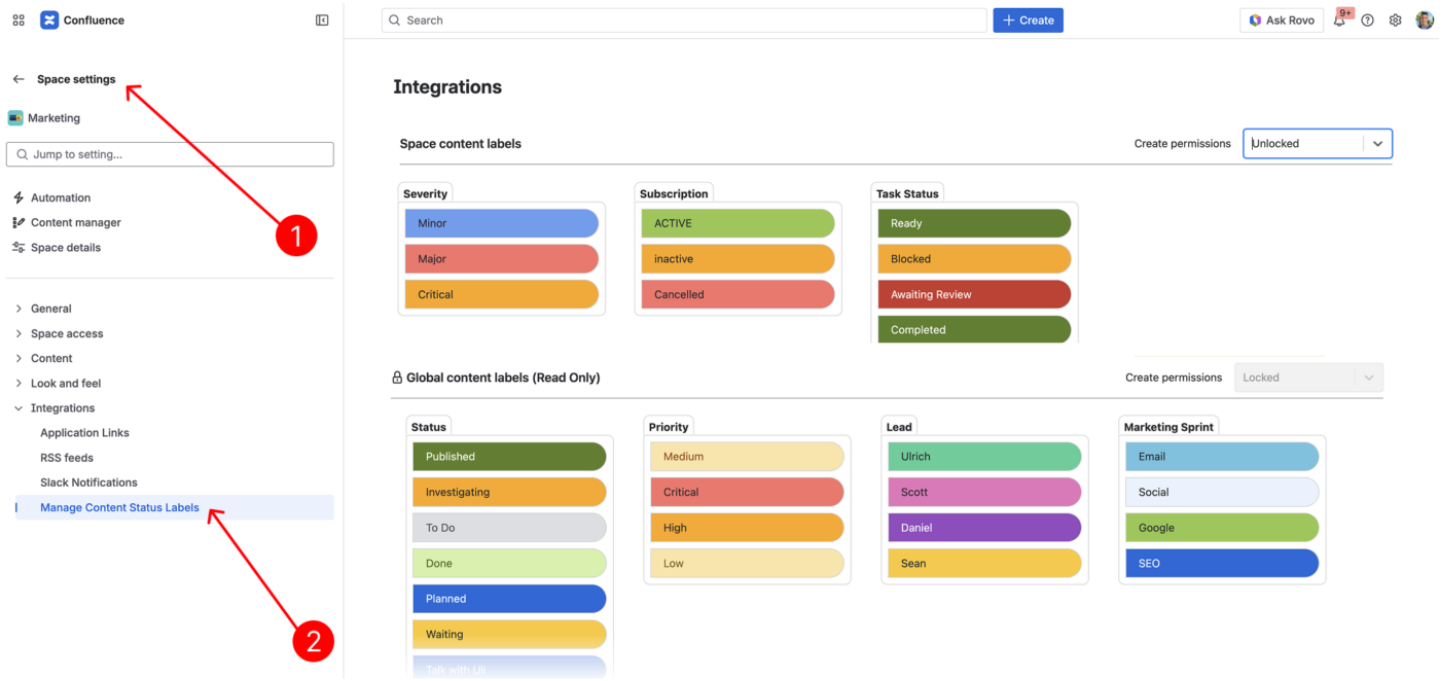

Space Pill Manager

The **Space Pill Manager** is used by **Space Admins** to manage pills within a single Confluence space.

Space admins can use this area to manage local space-level categories and values when space-level creation is allowed.

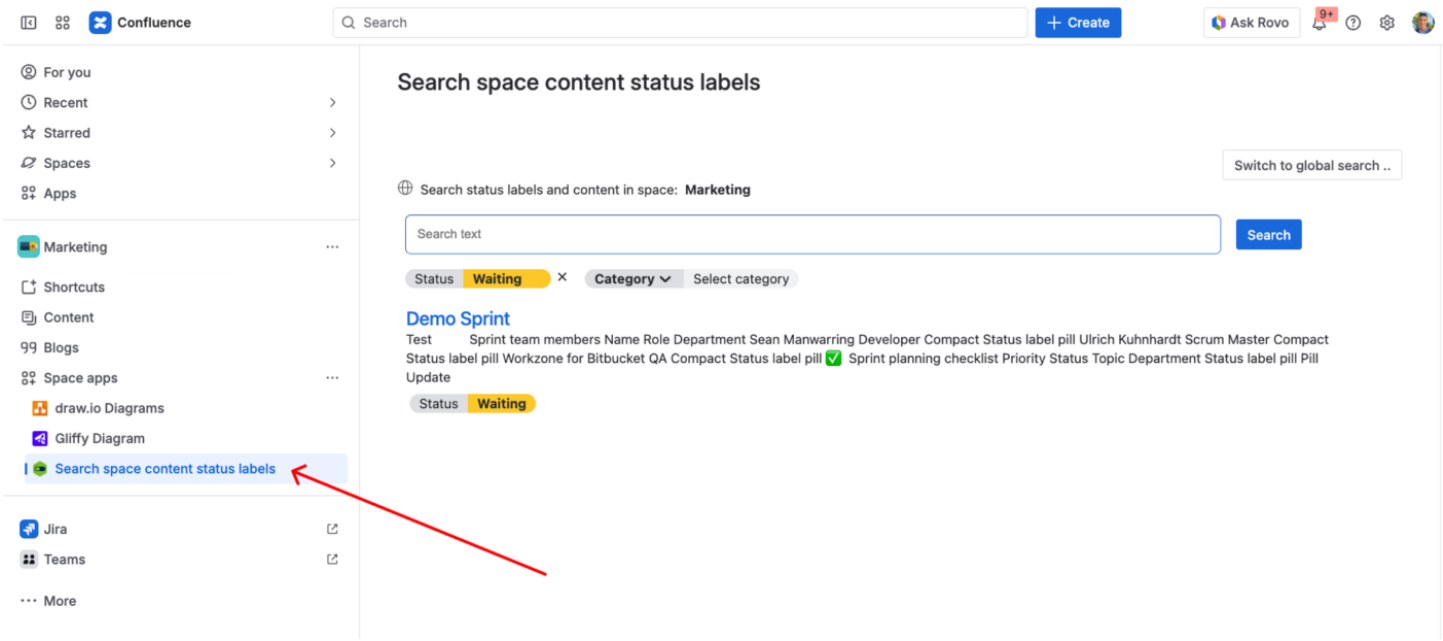

This is useful when a space needs more flexibility for team-specific workflows, project stages, or naming conventions.

To learn more about the two Manage Labels pages seen above, please refer to this **Global & Space Pill Management** page in the documentation space.

Search Space Content Status Labels

To access the search page, where you can view all pages containing a specific category and/or value - click the “Advanced Status Labels Search” button also found on the left-hand side under “**Space Apps**”
